

A L^AT_EX document class for the Revista Mexicana de Astronomía y Astrofísica*

William J. Henney[†]

2019/11/12

Abstract This document describes the `rmaa` L^AT_EX document class for the journal “Revista Mexicana de Astronomía y Astrofísica”. The macros can be used for

1. Preparing author manuscripts for the journal (including conference proceedings to be published in the “Serie de Conferencias”)
2. Typesetting an entire volume of the journal by inputting the individual article files from a container file. Facilities are included for automatic generation of TOC and Author Index.

1 The documentation driver file

This is the part that generates the documentation that you may or may not be reading, which is done with the help of the Makefile discussed in section 4.1.

```

1 ⟨*driver⟩
2 \documentclass{ltxdoc}
3 \usepackage{hyperref}
4 \usepackage{palatino}
5 \EnableCrossrefs \CodelineIndex \RecordChanges
6 \setlength{\parindent}{0pt}
7 \def\MacroFont{\footnotesize\tt}
8 \begin{document} \DocInput{rmaa.dtx} \PrintIndex \PrintChanges \end{document}
9 ⟨/driver⟩

```

2 The implementation

```

10 ⟨*package⟩
11 \newcommand{\rmaa@version}{3.26}
12 \newcommand{\rmaa@date}{2011/08/15}
13 \newcommand{\rmVersion}{\rmaa@version}
14 \newcommand{\rmDate}{\rmaa@date}
15 \NeedsTeXFormat{LaTeX2e}[1995/06/01]

16 \ProvidesClass{rmaa}[\rmaa@date\space v\rmaa@version\space RMxAA article
17 class]

```

2.1 Option Handling

Declarations that are needed in options

```
18 \newif\if@reviewarticle
19 \@reviewarticlefalse

```

These two need to be declared explicitly so that `\ExecuteOptions` actually does something.

```

94 \DeclareOption{twocolumn}{\@rmtwocoltrue}
95 \DeclareOption{onecolumn}{\@rmtwocolfalse}
96 \DeclareOption{twoside}{\PassOptionsToClass{\CurrentOption}{article}}
97 \DeclareOption{boldkeywords}{\@boldkeywordstrue}

```

Bold, upper-case keywords used to be the default. Now they must be turned on explicitly with the `boldkeywords` option.

```

98 \DeclareOption{boldkeywords}{\@boldkeywordstrue}

```

Pass any other option along to the article class.

```

99 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}

```

Default options are to be two-sided and based on the standard \LaTeX `article` class, unless we are processing the entire book, in which case we base ourselves on the standard `book` class. Default is to use `manuscript` option unless otherwise specified.

```

100 \ExecuteOptions{twoside,manuscript} \ProcessOptions\relax
101 \if@book
102 \if@rmtwocol\LoadClass[twocolumn]{book}\else\LoadClass{book}\fi
103 \newcommand{\abstract}{\relax}
104 \newcommand{\@maketitle}{\relax}
105 \else
106 \if@rmtwocol\LoadClass[twocolumn]{article}\else\LoadClass{article}\fi
107 \fi

```

Attempt to use `natbib` for citations 02 Jan 2003.

```

108 \if@natbib
109 \RequirePackage{natbib}[1999/02/25]
110 \bibpunct{({})}{;}{a}{}{,}
111 \def\bibfont{\small}

```

```

112 \renewcommand\bibsection{\section*{REFERENCES}}
113 \setlength\bibsep{0pt}
114 \setlength\bibhang{1.5em}
115 \bibliographystyle{rmaa}
116 \fi

```

We want the `graphicx` package for the extended syntax of `\includegraphics`. We want the `ifthen` package for using in these macros (although we don't much yet). We explicitly load `babel` since some \LaTeX distributions messed up the hyphenation if we didn't.

```

117 \RequirePackage{graphicx}
118 \RequirePackage{ifthen}
119 \IfFileExists{babel.sty}{%
120 %   \let\@restoreindent=\@afterindentfalse
121   \RequirePackage[english]{babel}
122 %   \@restoreindent
123 %% reinstate the definition of \@roman so as not to break .idx files
124 \@ifundefined{org@@roman}{\relax}{\renewcommand{\@roman}[1]{\org@@roman{##1}}}
125 }{%
126 \typeout{Package babel.sty not found - don't worry about this}}

```

Try to load the `dcolumn` and `booktabs` packages if they can be found. These can produce nicer-looking tables.

```

127 \IfFileExists{dcolumn.sty}{%
128   \RequirePackage{dcolumn}
129 }{%
130 \typeout{Package dcolumn.sty not found - you will not be able to
131 align columns on decimal points in tables}}
132 \IfFileExists{booktabs.sty}{%
133   \RequirePackage{booktabs}
134 }{%
135 \typeout{Package booktabs.sty not found - your tables will not look
136 as pretty as they ought too.}
137 }
138 \IfFileExists{makeidx.sty}{%
139   \RequirePackage{makeidx}
140 }{%
141 \typeout{Package makeidx.sty not found - Author Index may not work.}
142 }
143 %% commented out for moment since requires more modern version of LaTeX
144 %% \RequirePackage[latin1]{inputenc}

```

We use `hyperref` to get internal and external links. But I don't like the colored boxes so I turn those off. We use `etoolbox` for patching and robustifying at the moment. In the future, I want to port a lot of other stuff over to it. For instance, replace the `ifthen` package and the \TeX ifs too.

```

145 \RequirePackage{etoolbox}
146 \RequirePackage{hyperref}
147 \hypersetup{hidelinks}

```

We patch the `\@combinedblfloats` following a suggestion by Heiko Oberdiek at <https://tex.stackexchange.com/a/249743/3843>, which avoids problems when hyperlinks are split across pages.

```

148 \urlstyle{same}
149 \newcommand\email{\begingroup \urlstyle{rm}\Url}
150 \patchcmd\@combinedblfloats{\box\@outputbox}{\unvbox\@outputbox}{}{}

```

```

151 \errmessage{\noexpand\@combinedblfloats could not be patched}%
152 }%

```

2.2 Other setup stuff

Some declarations:

```

153 \newif\if@needaddresses
154 \@needaddressestrue
155 \newif\if@frontmatter
156 \@frontmatterfalse
157 \newif\if@inpreamble
158 \@inpreambletrue
159 \newif\if@firstauthor
160 \@firstauthortrue
161 \newif\if@firstaffil
162 \@firstaffiltrue
163 \newif\if@firstaltaffil
164 \@firstaltaffiltrue
165 \newif\if@firstkwd
166 \@firstkwdtrue
167 \newif\if@noexpandADS
168 \@noexpandADSfalse
169 \newif\if@sessiontitlepages
170 \@sessiontitlepagesfalse

```

\@rmaaEmpty These are used in various commands to check if arg was left blank
\@rmaaArg 171 \newcommand{\@rmaaEmpty}{}
172 \newcommand{\@rmaaArg}{}

2.3 Compatibility with old L^AT_EX versions

This package is based on the 1998/12/01 release of L^AT_EX. Older releases may not define all the commands that we need. Luckily, we can use `\providecommand` to define these if necessary. The following commands are not defined in the 1994/06/01 release.

\MakeUpperCase User commands:
\textsuperscript 173 \providecommand{\MakeUpperCase}[1]{\uppercase{#1}}
\textbackslash 174 \providecommand{\textsuperscript}[1]{\ensuremath{#1}}
175 \providecommand{\textbackslash}{\ensuremath{\backslash}}

\protected@xdef L^AT_EX internal commands:
\restore@protect 176 \providecommand{\protected@xdef}{%
177 \let\@protect\protect
\@unexpandable@protect 178 \let\protect\@unexpandable@protect
\hb@xt@ 179 \afterassignment\restore@protect
180 \xdef}
181 \providecommand{\restore@protect}{\let\protect\@protect}
182 \providecommand{\@unexpandable@protect}{\noexpand\protect\noexpand}
183 \providecommand{\hb@xt@}{\hbox to}

2.4 Page layout

The dimensions of the text were defined by Elizabeth. Text width is 169 mm with equal margins on the two sides:

```
184 \setlength{\textwidth}{169mm}
185 \setlength{\@tempdima}{\paperwidth}
186 \addtolength{\@tempdima}{-\textwidth}
187 \setlength{\oddsidemargin}{0.5\@tempdima}
188 \addtolength{\oddsidemargin}{-1in}
189 \setlength{\evensidemargin}{\oddsidemargin}
```

Text height is 225 mm, top margin is 14 mm.

```
190 \setlength{\textheight}{225mm}
191 \setlength{\topmargin}{-1in}
192 \addtolength{\topmargin}{14mm}
```

Space between columns in two-column styles, header, footer, paragraph indentation:

```
193 \setlength{\columnsep}{9.5mm}
194 \setlength{\headsep}{0.7cm}
195 \setlength{\footskip}{0.75cm}
196 \setlength{\parindent}{1.5em}
```

`\set@scalable@length` Try out a new scheme for dealing with various spacing dimensions and allowing the user to easily modify them. The command

```
\set@scalable@length{<name>}{<defaultlength>}{<stretch>}{<shrink>}
```

does a `\setlength{<name>}{<defaultlength plus stretch minus shrink>}` and also defines the user command `\<name>Scale{<factor>}` that can be used to rescale length by `<factor>`. Additionally, now defines the package command `\<name>@set@scale{<FACTOR>}` that also rescales the length by `<FACTOR>`, so that the length becomes $\langle factor \rangle \times \langle FACTOR \rangle \times \langle defaultlength \rangle$.

```
197 \newcommand\set@scalable@length[4]{%
198   %% arg #1: NAME of length without leading '\\'

255 %% initialize at default values with \@reset@NAME
256 \csname @reset@#1\endcsname
257 }

```

\parskip First use of this new infrastructure: set interparagraph space to be zero but with a small amount of stretchiness.

```

258 % \ifthenelse{\boolean{@manuscript}}{%
259 %   \set@scalable@length{parskip}{0.5\baselineskip}{0.3\p@}{0.1\p@}
260 % }{
261 %   \set@scalable@length{parskip}{0\p@}{0.3\p@}{0\p@}
262 % }

```

\abovesectionskip Define some utility rubber lengths for use in section 2.13.

```

\belowsectionskip 263 \newlength{\abovesectionskip}
\aboveparaskip 264 \newlength{\belowsectionskip}
\belowparaskip 265 \newlength{\aboveparaskip}
266 \newlength{\belowparaskip}

```

The default values for these lengths are those traditionally used for the onecol-umn style.

```

267 \@set@scalable@length{abovesectionskip}{-3.5ex}{-4ex}{-2ex}
268 \@set@scalable@length{belowsectionskip}{2.3ex}{0ex}{2ex}
269 \@set@scalable@length{aboveparaskip}{3.25ex}{2ex}{0.5ex}
270 \@set@scalable@length{belowparaskip}{-1em}{\z@}{\z@}

```

We also make scalable some of the standard float parameters. These are the same defaults as in the standard article classes, but slightly more stretchy. For the twocolumn style, they are currently halved, see below. Note that I have also lumped `\abovecaptionskip` in with these, since it plays a similar role. There is also a `\belowcaptionskip` but it is set to zero in the standard classes.

```

271 \@set@scalable@length{floatsep}{12\p@}{4\p@}{4\p@}
272 \@set@scalable@length{textfloatsep}{20\p@}{4\p@}{8\p@}
273 \@set@scalable@length{intextsep}{12\p@}{4\p@}{4\p@}
274 \@set@scalable@length{dblfloatsep}{12\p@}{4\p@}{4\p@}
275 \@set@scalable@length{dbltextfloatsep}{20\p@}{4\p@}{8\p@}
276 \@set@scalable@length{abovecaptionskip}{10\p@}{\z@}{\z@}

```

<pre> \@before@title@skip \@before@author@skip \@between@author@skip \@before@abstract@skip \@after@abstracthead@skip \@between@abstract@skip \@before@kwd@skip \@before@dates@skip </pre>	<p>Spacing parameters used in <code>\@maketitle</code>. These are not changed by default except by the user, so they don't need to go into <code>\@package@default@lengths</code>.</p> <pre> 277 \newlength{\@before@title@skip} 278 \newlength{\@before@author@skip} 279 \newlength{\@between@author@skip} 280 \newlength{\@before@abstract@skip} 281 \newlength{\@after@abstracthead@skip} 282 \newlength{\@between@abstract@skip} 283 \newlength{\@before@kwd@skip} 284 \newlength{\@before@dates@skip} 285 \@set@scalable@length{@before@title@skip}{2em}{\z@}{\z@} 286 \@set@scalable@length{@before@author@skip}{1.5em}{\z@}{\z@} 287 \@set@scalable@length{@between@author@skip}{0.5em}{\z@}{\z@} 288 \@set@scalable@length{@before@abstract@skip}{3ex}{1ex}{0.5ex} 289 \@set@scalable@length{@after@abstracthead@skip}{1ex}{\z@}{\z@} 290 \@set@scalable@length{@between@abstract@skip}{2ex}{1ex}{0.5ex} 291 \@set@scalable@length{@before@kwd@skip}{1ex}{0.5ex}{0.2ex} 292 \@set@scalable@length{@before@dates@skip}{2ex}{0.5ex}{0.2ex} </pre>
--	---

Spacing above and below displayed equations also wants to be done like this, but it is more complicated since the standard article classes make these change with the fontsize. Something to do later, maybe.

<pre> \@package@default@lengths </pre>	<p>The value actually used for these lengths is controlled by the <code>\SCALE</code> parameter, which depends on the style option that is in effect. This is set using the <code>\@package@default@lengths</code> command, which must be called every time the style changes (e.g., changing from onecolumn to twocolumn).</p>
--	---

Float parameters: don't allow bottom floats by default.

```

359 \renewcommand{\fps@figure}{tp}
360 \renewcommand{\fps@table}{tp}

```

```

\rmaa@AuthorWidthFrac
\rmaa@AbstractWidthFrac

```

These parameters control what fraction of the total text width can be used by the list of authors and the abstract/resumen, respectively.

```

361 \newcommand{\rmaa@AuthorWidthFrac}{1.0}
362 \newcommand{\rmaa@AbstractWidthFrac}{0.75}

```

Use a wide abstract to save space in the new style.

```

363 \if@newstyle\renewcommand{\rmaa@AbstractWidthFrac}{1.0}\fi

```

Some things to consider in future versions. Trying to avoid too many widows, etc. Apparently, the following will work best with `\flushbottom`.

```

364 %%\widowpenalty=10000
365 %%\clubpenalty=10000

```

Also, should perhaps try getting rid of underfull/overfull box warnings.

```

366 \hbadness=10000
367 \vbadness=10000
368 \setlength\hfuzz{\maxdimen}
369 \setlength\vfuzz{\maxdimen}

```

2.5 Various text styles for different contexts

```

\rmaa@AffilStyle
\rmaa@PagesStyle
\rmaa@YearStyle
\rmaa@VolumeStyle
\rmaa@VolumenStyle
\rmaa@JournalNameStyle
\rmaa@ReceivedStyle
\rmaa@AbstractHeaderStyle
\rmaa@JournalNameStyle

```

Style commands for the different fields used by `\maketitle` in constructing the title page of the article. These have the form `\rmaa@XYZStyle{TEXT}`. I'm not sure these were really a good idea, but never mind ...

```

370 \newcommand{\rmaa@AffilStyle}[1]{\normalsize\rmfamily#1}
371 \newcommand{\rmaa@PagesStyle}[1]{\normalsize\rmfamily#1}

2.7 Preamble commands

Everything you need for setting the title page, TOC and index entries, etc.

2.7.1 Commands for the title page

<pre> \resumen \@resumen \abstract \@abstract </pre>	<p>User commands for setting the resumen and abstract. These should be used in the document header. The internal commands \@resumen and \@abstract are used to hold the actual text pending output via the \maketitle command.</p> <pre> 444 \newif\if@setresumen 445 \newcommand{\resumen}[1]{% 446 %% \renewcommand{\@resumen}{\selectlanguage{spanish}\#1}}% 447 \renewcommand{\@resumen}{\ignorespaces\#1}}% 448 \setresumentrue 449 \renewcommand{\abstract}[1]{% 450 \renewcommand{\@abstract}{\ignorespaces\#1}} 451 \renewcommand\ADS@abstract{\#1} 452 %% Not a good idea, since then author macros are not expanded and 453 %% cause errors later. However, by not doing it we are vulnerable to 454 %% fragile commands..... 455 \if@noexpandADS\@onelevel@sanitize{\ADS@abstract}\fi </pre>
--	---

```

456 \@abstractpresenttrue
457 }
458 \newcommand{\ADSnoexpand}{\@noexpandADStrue}

\boldabstract This is the version for doing 1-page conference proceedings. Still save the text for
ADS but then write it out immediately as a bold paragraph.
459 \newcommand{\boldabstract}[1]{%
460 \gdef\ADS@abstract{#1}%
461 \renewcommand{\@abstract}{#1}%
462 \if@noexpandADS\@onelevel@sanitize{\ADS@abstract}\fi%
463 \noindent\textbf{\boldmath #1}
464 }

Default value in each case is to print out a warning if not set
465 \newcommand{\@resumen}{%
466 \@setresumenfalse \ClassWarningNoLine{rmaa}{No Spanish abstract
467 (resumen) specified - if you do not speak Spanish, this will be
468 translated by the editors}%
469 \textbf{Favor de proporcionar un resumen en espa\~nol. If you are
470 unable to translate your abstract into Spanish, the editors will
471 do it for you.} }
472 \newcommand{\@abstract}{\ClassWarningNoLine{rmaa}{No abstract
473 specified}}

\title Similarly, \title is the preamble command to set the title of the article. This
\@rawtitle is used in various places, typeset in different styles, hence the use of the inter-
\@TOCtitle nal \@rawtitle, \@title, \rmaaIndexTitle, and \@TOCtitle commands,
\rmaaIndexTitle each of which uses the relevant style from section 2.5
474 \newcommand{\@rawtitle}{Raw Title}
475 \newcommand{\@TOCtitle}{\rmaa@TOCtitleStyle{Title for TOC}}
476 \newcommand{\rmaaIndexTitle}{\rmaa@IndexTitleStyle{Title for index}.}

2.7.3 Commands for editors

Some user/editor commands for doing the TOC and index in the book option. They are defined here rather in the book-specific part since they need to be always available in order to avoid breaking documents.

<pre> \listofauthors \@rawauthors \rmaaTOCauthors </pre>	<p>The command <code>\listofauthors</code> formats an author list for use in the TOC. It should contain the same names as in the <code>\author</code> command, but without the affiliation garbage and using <code>\&</code> instead of and.</p> <pre> 647 \newcommand{\@rawauthors}{Raw Authors} 648 \newcommand{\rmaaTOCauthors}{\noexpand\rmaaTOCAuthorStyle{Author list for TOC}} 649 \newcommand{\listofauthors}[1]{% 650 \renewcommand{\@rawauthors}{#1} 651 \renewcommand{\rmaaTOCauthors}{\noexpand\rmaaTOCAuthorStyle{#1}}} </pre>
<pre> \indexauthor </pre>	<p>The command <code>\indexauthor</code> produces an index entry for each author. This command must come <i>after</i> the <code>\title</code> and the <code>\listofauthors</code> commands. Also, there should be one <code>\indexauthor</code> command for <i>each</i> author. We also add the author onto the end of the <code>\ADS@authors</code> macro and construct the</p>

`\ADS@authorinitial` by a most cunning method (see below), but only for the first author.

No, No, NO! This was all wrong. Backed out completely:

Completely rewritten (19 Dec 2002) since we now use the index class, so as to be able to alphabetize accented characters. A side effect of this is that `\index` no longer expands out the argument after the @, so we instead add all the `\index` commands to a list (`\indexauthor@deferlist`), which is executed in the `\@begofarticlehook`.

Note the stuff with `\toks0` is copied from Exercise 20.15 of the `TEXbook`—it is to make sure the latin1-accented name gets passed into the `idx` file.

We now go back to the old way of doing things, using an optional argument to the `\indexauthor` command that has the name without accents.

```

652 \newcommand\@isortkey{}
653 \newcommand\@emptykey{empty}
654 \newcommand\indexauthor[2][empty]{
655   \renewcommand\@isortkey{#1}
656   \ifx\@isortkey\@emptykey \renewcommand\@isortkey{#2}\fi
657   \index{\@isortkey @{\rmaaindexauthorstyle{#2}}\hskip1em plus1em minus0.4em
658     \rmaaindexTitle\hskip1em plus2em minus0.4em\penalty-100
659     \rmaaindexauthors}}
660   \indexauthorADS{#2}
661 }
662 %%\def\indexauthor@deferlist{\relax}
663 %%\long\def\indexauthor#1{
664 %%  \def\@@name{#1} \toks0=\expandafter{\@@name}
665 %%  \toks1=\expandafter{\indexauthor@deferlist}
666 %%  \protected@xdef\indexauthor@deferlist{%
667 %%    \the\toks1
668 %%    \noexpand\index{\the\toks0@{\noexpand\rmaaindexauthorstyle{\the\toks0}\noexpand\hskip1em
669 %%      \rmaaindexTitle\noexpand\hskip1em plus2em minus0.4em\noexpand\penalty-100
670 %%      \rmaaindexauthors}}
671 %%  }
672 %%  \indexauthorADS{#1}
673 %%  }
674 %%\xdef\indexauthor@deferlist{}
675 \newcommand\indexauthorADS[1]{%
676   \if@firstauthor\protected@xdef\ADS@authorinitial{\firstletter{#1}}\fi
677   \protected@xdef\ADS@authors{\ADS@authors\if@firstauthor\else ; \fi
678     #1}
679   \@firstauthorfalse
680 }

```

Note that the first #1 sets the key for the index, making sure it actually starts with first letter of the surname. Meanwhile, the `@{ . . . }` expression, which starts with some control sequences is what is written to the `.ind` file. See the `makeindex` man page for details.

`\KillAllAccents` These are utility functions used in the above. `lett` is a counter indicating the current letter in the string. `\firstletter` just prints the first letter of its argument.

```

715 \newcommand{\@accepted}{}
716 \newcommand{\@MSnum}{0000}
717 \newcommand{\@DOI@prefix}{https://doi.org/10.22201/ia.01851101p}
718 \def\@DOI@url{\url{https://doi.org/10.22201/ia.01851101p.2099.00.00.00}}

```

The following commands are most useful in the book style. However, the `\SetConfTitle` command can now be used in individual articles to set the header for the preprint style.

```

719 \newcommand{\@reunionplace}{Lugar de la reuni\'on}
720 \newcommand{\@reuniondate}{Fecha de la reuni\'on}
721 \newcommand{\@conftitle}{Conference Title}
722 \newcommand{\SetReunion}[2]{\renewcommand{\@reunionplace}{#1}\renewcommand{\@reuniondate}{#2}}

2.8 Notes for Author Proofs and Communication between Editors

We introduce a command `\Note` that should be used to describe any change made to the manuscript. These are a bit tricky to get right. In general we use `\marginpar` but this only works in outer paragraph mode, so we just bung the box where we are if we are in a figure caption or something. If we are in the preamble, then we just use a s part of the

a

November 13, 2019

command.

```

2.9 Bibliographic Records for ADS

\ADS@BibCode We use the \ADS@BibCode command to hold the bibliographic code for ADS. It is used in the %R field of the bibliographic record for each article. The format is

\ADS@year
\ADS@journal
\ADS@volume

\ADS@firstpage

\ADS@authorinitial

YYYYJJJJJVVMPPPPA

where YYYY is the year, JJJJJ is the journal code, which is RMxAA or RMxAC, VVVV is the volume number (right-justified), M is not used by us, PPPP is the first page number (right-justified), and A is the initial of the first author's surname. The volume and page fields are padded with periods ('.'), which causes us some fun (this is done with the macro \PadToFourWithDots described below) .

All these individual bits are held in the commands \ADS@year, \ADS@journal, \ADS@volume, \ADS@firstpage, \ADS@authorinitial.

```
768 \newcommand{\SetADSBibCode}[1]{\renewcommand{\ADS@BibCode}{#1}}
769 \newcommand{\ADS@BibCode}
770 {\ADS@year\ADS@journal\ADS@volume.\PadToFourWithDots{\ADS@firstpage}\ADS@authorinitial}
771 \newcommand{\ADS@year}{2001}
772 \newcommand{\ADS@journal}{\if@proceedings RMxAC\else RMxAA\fi}
773 \newcommand{\ADS@volume}{....}
```

These two are just set to default values here, \ADS@firstpage is set in the document environment for included articles, in the frontsection environment, \tableofcontents command, index and abstracts environments. Also by \AtBeginDocument for stand-alone articles.

God knows how we are going to do \ADS@authorinitial!

```
774 \newcommand{\ADS@firstpage}{....}
775 \newcommand{\ADS@authorinitial}{A}
```

We also have a whole slew of other fields that can be set. These are all listed in Table 1. Most of them still have to be defined. A lot of these macros are set by other commands, as mentioned in the Table, but some need to be set explicitly here.

\ADS@doi	<p>The user/editor command \DOI is used to set this.</p> <pre>776 \newcommand{\ADS@doi}{https://doi.org/10.22201/ia.01851101p.0000.00.00.00}</pre>
\ADS@journalname	<p>This does not contain any accents at the moment so as not to cause problems—this maybe should be changed though.</p> <pre>777 \newcommand{\ADS@journalname}{% 778 \if@proceedings\@conftitle\space (Eds. \@editors) \fi% 779 Revista Mexicana de Astronom\'\i{}a y Astrof\'\i{}sica% 780 \if@proceedings\space (Serie de Conferencias)\fi% 781 \space Vol. \@volume, pp. \ADS@firstpage--\ADS@lastpage\space (\@year)% 782 \space (http://www.astroscu.unam.mx/\~{\rmaa/}) 783 }</pre>
\ADS@keywords	<p>\ADS@abstract is straightforward, since we already have the text saved as \@abstract. We could do the same with \ADS@keywords but to avoid unwanted formatting we explicitly set it in \keywords (p. 15). \ADS@title is just set to \@rawtitle, which we were already using for another purpose.</p> <pre>784 \let\ADS@title=\@rawtitle 785 \newcommand{\ADS@keywords}{No keywords specified} 786 \newcommand{\ADS@abstract}{No abstract specified}</pre>
\ADS@abstract	
\ADS@title

%R	References	\ADS@references	generate from the bibliography

\ADS@authors \ADS@authors wants to be in “Other, A. N.” format, but with semi-colons between authors. The most natural way to do this seems to be with \indexauthor (p. 18). We append each author to this macro, which means we must explicitly clear it for each new article (done in \article). .

```
787 \newcommand{\ADS@authors}{} 
```

```

\ADS@fulldate Other sundry data, together with user commands for bits that can be set
\ADS@lastpage by the Editors. The \ADS@url is constructed from the website (currently
\ADS@copyright http://www.astrosmo.unam.mx/rmaa/, the journal descriptor (e.g., RMxAC..10/),
\ADS@website followed by the path to the PDF file (e.g., PDF/RMxAC..10_HEW1.pdf).
\ADS@url 788 \newcommand{\ADS@website}{http://www.astrosmo.unam.mx/rmaa/}

793 \newcommand{\ADS@lastpage}{00}
794 \newcommand{\ADS@copyright}{(C) \ADS@year; Instituto de Astronom\i{a},
795 Universidad Nacional Aut\onoma de M\exico}
796 \newcommand{\SetNumber}[1]{\renewcommand{\ADS@number}{-#1}}

```

```

797 \newcommand{\SetWebsite}[1]{\renewcommand{\ADS@website}{#1}}
798 \newcommand{\SetMonthNumeric}[1]{\renewcommand{\ADS@fulldate}{#1/\ADS@year}}

\ADS@affil These two are somewhat more problematical. Affiliation currently only works
\ADS@references for the first author (see ...) pending redesign of the user interface. References are
now done by wrapping the thebibliography environment to open another
input stream on the same file and search through for the \bibitems.

799 \newcommand{\ADS@references}{}
800 \newcommand{\ADS@affil}{}

```

Define two macros that expand to the strings `\begin{thebibliography}` and `\end{thebibliography}`. Note that the idea for this and much else is inspired by the code for the `docstrip` package. Also define `\StartBibX` in case authors use the more standard `\begin{thebibliography}{} syntax`.

```

801 \edef\EndBib{\expandafter@gobble\string\end\string{thebibliography}\string}}
802 \edef\StartBib{\expandafter@gobble\string\begin\string{thebibliography}\string}}
803 \edef\StartBibX{\expandafter@gobble\string\begin\string{thebibliography}\string}\string{\stri

```

Define two new logical variables. `\ifAnotherline` is true if we want to read another line from the input stream. It is set to false when we encounter the `\end{thebibliography}`. `\ifInBib` is set to true when we find the `\begin{thebibliography}` and tells us to start saving the following lines.

```

804 \newif\ifAnotherLine
805 \newif\ifInBib

```

`makeOther` We need a macro to change the catcodes of lots of things to other.

```

806 \def\makeOther#1{\catcode`#1=12\relax}

```

`\RereadBiblio` Define a macro to do all the fiddly stuff. This is used at the beginning of thebibliography environment (Sec 2.16).

```

807 \newread\tf@biblio
808 \newcommand{\RereadBiblio}{%

```

Open the current file again for reading

```

809 \begingroup
810 \immediate\openin\tf@biblio=\articlename

```

Everything in a group to be safe. Initialize logicals. Black magic to change catcodes and avoid blank lines being interpreted as `\par`.

```

811 \AnotherLinetrue\InBibfalse
812 \makeOther\ \makeOther\\\makeOther\%%
813 \makeOther#\makeOther^\makeOther^^K%
814 \makeOther\_ \makeOther^A\makeOther\%%
815 \makeOther~ \makeOther{\makeOther\}\makeOther\&%
816 \endlinechar-1\relax

```

Start looping through the file. Read each line to the macro `\Line`. If we have got to EOF or end of biblio then set `\AnotherLinefalse`.

```

817 \loop
818 \read\tf@biblio to \Line
819 \ifx\Line\EndBib\AnotherLinefalse\InBibfalse\fi
820 \ifeof\tf@biblio \AnotherLinefalse\fi

```

If we are in the biblio and the line is not blank then append it to the \ADS@references macro together with a newline.

```
821 \ifInBib
822 \ifx\Line\empty\else\xdef\ADS@references{\ADS@references\Line^^J}\fi
823 \fi
```

Check if the line we just saw was the start of biblio, then repeat the loop if necessary.

```
824 \ifx\Line\StartBib\InBibtrue\fi
825 \ifx\Line\StartBibX\InBibtrue\fi
826 \ifAnotherLine\repeat
827 \immediate\closein\tf@biblio
828 \endgroup
829 }
```

\PadToFourWithDots Utility function for left-padding a number to 4 characters with periods. Used in constructing \ADS@BibCode. This is a very simple algorithm and *requires* that the argument actually be a number—if it is not then dire consequences will result.

```
830 \newcommand{\PadToFourWithDots}[1]{%
831 \ifnum #1 > 999 #1%
832 \else\ifnum #1 > 99 .#1%
833 \else\ifnum #1 > 9 ..#1%
834 \else ...#1%
835 \fi\fi\fi}
836 %% \ifnum \count0 > 999 #1%
837 %% \else\ifnum \count0 > 99 .#1%
838 %% \else\ifnum \count0 > 9 ..#1%
839 %% \else ...#1%
840 %% \fi\fi\fi}
```

\AuthorADS New mechanism for setting the affiliations for ADS. The author labels (AA, AB, ...) are generated using two nested counters. We use the \robustify command from etoolbox so that accented characters in the affiliation addresses do not blow up. The list of accents may need to be expanded.

\ADS@affiliations

```
841 \newcounter{AUTHOR}
842 \newcounter{author}[AUTHOR]
843 \stepcounter{AUTHOR}
844 \newcommand\ADS@affiliations{}
845 \robustify{'}\robustify{\i}\robustify{\~}\robustify{\'}
846 \def\AuthorADS#1#2{%
847 \begingroup

856 \xdef\ADS@affiliations{\ADS@affiliations, \Alph{AUTHOR}\Alph{author} (#2)}
857 }%
858 \endgroup
859 }
```

\ADS@dumpdata \ADS@dumpdata is the macro that actually does the job of writing out all the data
 \ADS@write to an auxiliary file, using \ADS@write to write each field. The file is set up with
 \ADS@openfile \ADS@openfile, which currently is done in the TOC of a book. The new multi-
 author affiliations are used if \ADS@affiliations has been set, otherwise it
 falls back to the single-author version \ADS@affil.

```

```

2.10 Automatic calculation of the page range

Another issue that has cost me a lot of grief. Still, it finally seems to be sorted now. All hail Jeff Goldberg.

Cunning trick to get the page numbers from `\pageref`. Put a label on the first and last page of the document using `\AtBeginDocument` and `\AtEndDocument`. This way won't work for the book option. In that case, we do it by defining `\@endofarticlehook` and `\@begofarticlehook` as parallels to `\AtEndDocument` and `\AtBeginDocument`. Note that we have to defer adding `\@begofarticlehook` to `\AtBeginDocument` to make sure it comes after the redefinitions of `\ref` and `\label`.

```
905 \if@book\AtEndDocument{\ADS@closefile}\else
906 %\AtBeginDocument{\@begofarticlehook}
907 \AtEndDocument{\@endofarticlehook}
908 \fi
```

`\@begofarticlehook`

Since we are getting more and more things that need to be done at the beginning of every article, frontsection, etc we define a sister hook to `\@endofarticlehook`. This hook does the following:

1. Labels the first page
2. Sets `\ADS@firstpage`
3. runs and then clears `\indexauthor@deferlist`
4. resets the keyword counter

It is executed in the following circumstances:

1. At `\begin{document}` for standalone files
2. At `\begin{document}` for each included file
3. At beginning of front sections
4. At beginning of TOC
5. At beginning of Author Index
6. At beginning of abstracts

For some reason, this is not always within the right group, so we use `\xdef` just to be sure.

```
909 \newcommand{\@begofarticlehook}{%
910   \if@frontmatter\frontlabel{RMAAFirstPage}\else\label{RMAAFirstPage}\fi%
911   \xdef\ADS@firstpage{\@arabic{\c@page}}%
912   \if@book\else\makeindex\fi % needed so default index is defined in stand-alone articles
913 %%   \indexauthor@deferlist
914 %%   \xdef\indexauthor@deferlist{}
915   \inpreamblefalse
916   \setcounter{kwdcounter}{0}
917 }
```

`\@endofarticlehook` This is a hook to be run at the end of each article currently, it just labels the last page and writes out all the ADS data to an auxiliary file. It should not produce any printed output. It is modelled on the `\AtEndDocument` command, to which it reduces in the case of a single article.

```

918 \newcommand{\@endofarticlehook}{%
919   \if@debug{\ClassWarning{rmaa}{***Doing Hook***}}\fi
920   \if@debug{\ClassWarning{rmaa}{ADSabstract is: \ADS@abstract}}\fi
921   \clearpage\rmaa@lastpagelabel\if@book\ADS@dumpdata\fi
922   \ifx\NotesList\@rmaaEmpty\else\OutputNotes\fi
923   \if@debug{\ClassWarning{rmaa}{Notes list is: \NotesList}}\fi
924 }

```

`\rmaa@lastpagelabel` New version of last page label command copied from Jeff Goldberg's `lastpage.sty` package - we can't just use `\label` here in case the output routine for the last page has already been called. Instead, we first explicitly clear the page, step back the page counter, explicitly write to the .aux file, then restep the page counter again.

But this will conflict with the `hyperref` package, which does labels differently. Compensate for that by using the five-argument form.

Also set the `\ADS@LastPage` macro to the appropriate number.

```

925 \newcommand{\rmaa@lastpagelabel}{%
926   \addtocounter{page}{-1}%
927   \immediate\write\@auxout{\string
928     \newlabel{\articlename:RMAALastPage}{{}{\thepage}}{{}}}%
929   \edef\ADS@lastpage{\thepage}%
930   \addtocounter{page}{1}}

```

2.11 Deal with explicit change in number of columns

Sometimes, when formatting a book, we need to switch between one-column articles and two-column articles. For this to work, we need to wrap the standard \LaTeX commands to set the `\@rmtwocol` flag appropriately and also reset the package default values of all scalable lengths. .

```

931 \let\latexonecolumn=\onecolumn
932 \let\latextwocolumn=\twocolumn
933 \renewcommand{\onecolumn}{\@rmtwocolfalse\@package@default@lengths\latexonecolumn}
934 \renewcommand{\twocolumn}{\@rmtwocoltrue\@package@default@lengths\latextwocolumn}

```

2.12 The actual formatting of the title

Note, we have to redefine the `\maketitle` command to use the numbered footnotes. This means we needn't use the `atbeginend` stuff.

```

935 \renewcommand{\maketitle}{\par
936   \beginngroup

```

Don't switch to marked footnotes. This is consistent with existing style but I'm not sure I like it

```

2.14 Appendices

Make sure that appendices in individual articles work properly. We copy the definition from the article class (the book one doesn't do what we want).

`appendices` This uses an environment `appendices` inside of which each `\section` will become a separate appendix. Note that the appendices must come before the references (otherwise the full addresses mechanism will not work properly). We make the equation numbering be subordinate to the appendix (equations A12, B6, etc). Finally, we have a `medskip` followed by `APPENDICES` to introduce them.

```

1157 \newenvironment{appendices}{\par
1158     \begingroup
1159     \setcounter{section}{0}%
1160     \setcounter{subsection}{0}%

1295     \setlength{\parsep}{\parskip}%
1296   }%
1297   \item[]{\end{list}}

```

2.16 The bibliography and references

`\beforebibliioskip` I'm not entirely sure why I introduced these two commands, since directly putting `\vspace` before and after `\begin{thebibliography}` seems to work well enough.

```
1298 \newlength{\beforebibliioskip}
1299 \setlength{\beforebibliioskip}{0pt}
1300 \newlength{\afterbibliioskip}
1301 \setlength{\afterbibliioskip}{0pt}
```

`thebibliography` The environment itself is done as starred section with extra vertical space after heading. This space is currently zero. In the book style we do the cunning trick with rereading the file in order to get the references into the `\ADS@references` macro.

```
1302 \renewenvironment{thebibliography}{%
1303   \if@book\RereadBiblio\fi
1304   %% \vspace*{\beforebibliioskip}
1305   \section*{REFERENCES} \frenchspacing
1306   %% \vspace*{\afterbibliioskip}
1307   \small
```

The references themselves are set as a list in order to get the hanging indentation. They are done in a smaller font and with french spacing so we needn't worry about the distinction between sentence-ending periods and abbreviations.

```
1308 \list{\null}{\leftmargin 1.5em\labelwidth\z@\labelsep\z@\itemindent -1.5em
1309   \itemsep\z@\parsep\z@\usecounter{enumi}}
1310 \sloppy\clubpenalty4000\widowpenalty4000
1311 \sfcode'\.=1000\relax\@biblisttrue}
1312 {\endlist\@biblistfalse\normalsize\@outputaddressesifnecessary}
```

2.17 Uniquification of cross-references

`\articlename` In order that the `\label{}` command in individual articles be guaranteed to give a unique anchor, we append the article name (held in the `\articlename` command) to each key. This requires redefinition of the following commands: `\cite`, `\nocite`, `\ref`, `\pageref`, `\label`.

`\oldcite` The original versions of these commands are saved as `\oldcite`, `\oldnocite`, etc.

`\oldref` The uniquifying of cross-references is now always done, so we don't get multiply-defined labels in the single article case

```
\oldpageref
\oldlabel 1313 \newcommand{\articlename}{anon}
1314 \AtBeginDocument{
1315   \let\oldcite=\cite
1316   \let\oldnocite=\nocite
1317   \let\oldref=\ref
1318   \let\oldpageref=\pageref
1319   \let\oldlabel=\label
1320 }
```

Uniquify all cross-references by prepending the article name. This now has to go into `\AtBeginDocument` so it is working on the new versions that `hyperref.sty`

has set up. Then we need to put the `\@begofarticlehook` afterwards, so that the first page label is using the new definitions.

```

1321 \AtBeginDocument{
1322   \renewcommand{\ref}[1]{\oldref{\articlename:#1}%
1323     \if@debug{\ClassInfo{rmaa}{Reference to \articlename:#1}}\fi}
1324   \renewcommand{\pageref}[1]{\oldpageref{\articlename:#1}%
1325     \if@debug{\ClassInfo{rmaa}{Page reference to \articlename:#1}}\fi}
1326   \renewcommand{\label}[1]{\oldlabel{\articlename:#1}%
1327     \if@debug{\ClassInfo{rmaa}{Label for \articlename:#1}}\fi}%
1328   \@begofarticlehook
1329 }%
```

Citations are more complicated since they can contain a list of keys. These are really only here for use with the `rmaacite` package, which is utterly deprecated (02 Jan 2003) now that I have the `natbib` code working. The command `\cite` should *not* be used with `natbib`: use `\citep`, `\citete`, etc. instead.

```

1330 \renewcommand{\nocite}[1]{\@bsphack
1331   \@for\@citeb:=#1\do{%
1332     \edef\@citeb{\expandafter\@firstofone\@citeb:\articlename}%
1333     \if@files\immediate\write\@auxout{\string\citation{\@citeb}}\fi
1334     \ifundefined{b@\@citeb:\articlename}{\G@refundefinedtrue
1335       \latex@warning{Citation '\@citeb' undefined}}{}}%
1336   \@esphack}
1337 \renewcommand{\cite}[1]{\oldcite{#1:\articlename}}
1338 %   \end{macrocode}
1339
1340
1341 % Horrible fiddling with the bibliography citation mechanism.
1342 % This has to be globally available in case rmaacite puts it in the
1343 % \texttt{.aux} file.
1344 %   \begin{macrocode}
1345 \def\lbbibcite#1#2#3{\global\@namedef{b@#1}{#2}
1346   \global\@namedef{by@#1}{#3}}
```

`\oldbibitem` Of course, `\bibitem` needs to get the uniquification treatment as well. While we are at it, we redefine it to use consecutive integers for the key if the user leaves it blank (using the counter `rmaabib`). This allows one to put `\bibitem{}` for all your references without getting annoying messages about multiply-defined labels.

We also take the opportunity to insert the optional argument to `\bibitem` if it is missing in the form Author(DATE) so that `natbib` doesn't try to do numerical citations. `Natbib` already provides a hook `\@extra@b@citeb` to help uniquify the citation key, so we just plug into that. However, it puts it *after* the original key, not before as I had had it. Easiest solution is to change the way that I do it. 02 Jan 2003. Note that the `\@extra@b@citeb` does not get written to the `.aux` file in the `\citation` command but it does work.

```

1347 \if@natbib\def\@extra@b@citeb{: \articlename}\fi

2.18 HTML Table of Contents

\HyperTOCEntry These commands are used to write information to the .htoc file, which is used
 \HyperTOCpart in generating a Web Page of the Table of Contents. Since they only ever appear
 \HyperTOCmeeting
 \HyperTOCeditors
 \HyperTOCpreamble

preceded by `\protect` in the argument to an `\addtocontents` command, they should never need to be expanded by the macros. However, we define them here just in case ...

```

2.21 Front sections

`\notitle` The environment `frontsection` is for doing a section in the front matter (preface, list of participants, or whatever). It has one optional argument:
`\shortname` #1 Short title (no embedded spaces) for use in making PS files. E.g., “list_of_participants”.
`frontsection`

and two mandatory arguments:

#2 Title of section (e.g., ‘Preface’)

#3 Commands to be evaluated before processing the contents of the environment. This is mainly useful for putting in the things that would go in the preamble of a normal article (e.g., `\listofauthors`, `\indexauthor`, `\notitle`)

```

4 Other files

4.1 The driver and make files

These are put here for completeness, although they still need to be distributed separately since otherwise the user won't be able to unpack this file into its constituent parts.

The Makefile has two principal rules: `docs`, and `macros`. The `docs` rule produces a PDF and gzipped PS file of the documentation. I still haven't perfected the combination of rules required to get it to run \LaTeX enough times in all circumstances. The `macros` rule runs \LaTeX on `rmaa.ins` in order to unpack `rmaa.cls` and all the other little files (including the Makefile and the `rmaa.ins` files themselves...

First set up lists of various types of file.

```

2262 \makefile
2263 DOFILES=rmaa.pdf rmaa.ps.gz
2264 MACRO_LTX_FILES=rmaa.cls rmaa.ins rmaacite.sty adshtml.sty ADS.tex
2265 SHELLSCRIPTS=makeads.sh
2266 MACRO_OTHER_FILES=adshtml.perl sample.latex2html-init
2267 MAKEFILE=Makefile
2268 MACROFILES=$(MACRO_LTX_FILES) $(SHELLSCRIPTS) $(MACRO_OTHER_FILES)
2269 SKELETONFILES=ADS.tex

```

Install the files read only in the parent directory (idea is that the source files are in a subdir of the installation dir).

```

2270 INSTALL=install
2271 INSTALL_DIR=..

```

The default rule is to make everything. Installation must be explicitly asked for.

```

2272 all: docs macros
2273
2274 install: install-docs install-macros

```

2275

Most files are installed read-only to prevent editing. Skeleton files must be writeable. Must be careful not to overwrite the Makefile in the parent directory.

```
2276 install-macros: macros
2277     $(INSTALL) -m 444 $(MACRO_LTX_FILES) $(MACRO_OTHER_FILES) $(INSTALL_DIR)
2278     $(INSTALL) -m 555 $(SHELLSCRIPTS) $(INSTALL_DIR)
2279     $(INSTALL) -m 644 $(SKELETONFILES) $(INSTALL_DIR)
2280
2281 install-docs: docs
2282     $(INSTALL) rmaa.pdf $(INSTALL_DIR)/rm-fulldocs.pdf
2283
```

Make the PDF and gzipped PS files.

```
2284 docs: $(DOCFILES)
2285
```

Make everything else if either the .dtx or .ins files have changed.

```
2286 macros: rmaa.dtx rmaa.ins
```

Ensure that all the macro files can be written to then recreate them. The touch is there in case any of the files don't exist yet.

```
2287     touch $(MACROFILES) $(MAKEFILE)
2288     chmod u+w $(MACROFILES) $(MAKEFILE)
2289     latex "\input{rmaa.ins}"
```

TeX automatically adds the .tex extension to extensionless files, bless it. We fix this and take the opportunity to convert back to TABs all that it has lovingly converted to spaces.

```
2290     cp -f $(MAKEFILE) $(MAKEFILE).BCK && unexpand $(MAKEFILE).tex >| $(MAKEFILE)
```

Make the shell scripts executable and everything unwriteable (so they don't get hand-edited by mistake). However, undo this for the files that the user is *supposed* to modify.

```
2291     chmod a+x $(SHELLSCRIPTS)
2292     chmod a-w $(MACROFILES) $(MAKEFILE)
2293     chmod u+w $(SKELETONFILES)
2294
```

We now use PDF_{La}TeX for this.

```
2295 rmaa.aux: rmaa.dtx rmaa.ind rmaa.gls
2296     @echo "REGENERATING .aux FILE"
2297     pdflatex "\nonstopmode\input{rmaa.dtx}"
2298
2299 rmaa.ind: rmaa.idx
2300     @echo "REGENERATING INDEX"
2301     makeindex -s gind.ist rmaa
2302
2303 rmaa.gls: rmaa.glo
2304     @echo "REGENERATING CHANGELOG"
2305     makeindex -s gglo.ist -o rmaa.gls rmaa.glo
2306
2307 rmaa.pdf: rmaa.aux rmaa.ind rmaa.gls
2308     @echo "REGENERATING .pdf FILE"
2309     pdflatex "\nonstopmode\input{rmaa.dtx}"
2310
2311 clean:
```

```

2312      rm -f rmaa.aux rmaa.dvi rmaa.ind rmaa.gls
2313 </makefile>

```

The `rmaa.ins` file uses the `docstrip` package to split out all the files and strip off this documentation.

```

2314 <*ins>
2315 %%
2316 %% Installation batch file for the RMAA LaTeX package

2362
2363 %% Local Variables:
2364 %% mode: LaTeX
2365 %% mode: Font-lock
2366 %% End:
2367 </ins>

```

4.2 Extended citation syntax

Modified from a file called mnrascite.sty I no longer remember where I stole the original version of this from

Alterations to the cite commands to make them do more sensible things. N.B. the bibliography style should produce entries which have labels where the date is delimited by angle brackets ‘ $\langle \rangle$ ’ for these macros to work properly. They will not give very sensible error messages if you do not do this properly.

A new command `\scite{key}` is defined which produces a citation which is suitable for insertion in a sentence. i.e., it does not put brackets around the whole citation, only the date. Also `\pcite{key}` produce output with no parentheses whatsoever.

Should redefine `\@bibitem` really to have any hope of compatibility the command `\lbibcite` is defined to deal with the citations.

```

2368 <*rmaacite>
2369 \def\bibitem[#1<#2>]#3{\par\hangindent=1.5em\hangafter=1
2370   \if@filesw

4.3 Auxilliary files for generating ADS data

The ADS data are written by \LaTeX to a .ads file. This file then has to be included in the following file (ADS.tex), which is run through \LaTeX 2HTML (see below).

```

2426 \begin{ads-container}
2427 %%
2428 %% Instructions:
2429 %% Edit the \input{} line below to reflect the name of your file.
2430 \documentclass{article}
2431 \usepackage[latin1]{inputenc}
2432 \usepackage{adshtml}
2433 \newcommand{\ADSfield}[2]
2434 {\%#1 #2\}
2435 %%\newcommand{\ADSvfield}[2]
2436 %%{\%#1 \begin{verbatim}#2\end{verbatim}}
2437 \newenvironment{ADSarticle}{}{\par\bigskip}
2438 \renewcommand{\bibitem}[2][\par]
2439 \setlength{\parindent}{0pt}
2440 \renewcommand{\ThisVolume}[1]{%
2441   2001, \RMAASC, 12, \oldpageref{#1:RMAAFirstPage}}

```

```

2442
2443
2444 \begin{document}
2445 \makeatletter
2446 \input{rmbooksamp.ads}
2447 \end{document}
2448 \</ads-container>

```

This is the `adshtml.sty` style file used by `ADS.tex`. It just defines a few macros that might be used in abstracts, etc (really it should define them all). This now gets all its code from Sec 3.

```

2449 \<adshtml-style>
2450 %% Nothing else needs to go here now.
2451 \</adshtml-style>

```

The init file for `latex2html`.

```

2452 \<latex2html-init>
2453 $PDFTOCAIRO = "pdftocairo";
2454 $PDFLATEX = "pdflatex";
2455 $LATEX = "latex";
2456 $MAX_SPLIT_DEPTH = 0;
2457 $HTML_VERSION = "4.0,math";
2458 $NO_SIMPLE_MATH = 1;
2459 $ADDRESS = "<p><address><a href=\"mailto:rmaa@astro.unam.mx\">rmaa@astro.unam.mx</address></p>";
2460 $INFO = "<p>This document was created using latex2html and the rmaa latex macros</p>";
2461 $NO_NAVIGATION = 1;
2462 1;
2463 \</latex2html-init>

```

This is the `adshtml.perl` file that is used by `LATEX2HTML`. Some bizarre `TEXy` command sometimes show up so we tell it to ignore these. All the astronomy macros that come from AAS are processed in `TEX`. That way they get made to images but with an `ALT` tag that has the original code, which is what will be picked up by `lynx`, with the result that they get passed intact into the final `.txt` file.

```

2464 \<adshtml-perl>
2465 package main;
2466
2467 $dum = &do_cmd_makeatletter();
2468
2469 sub do_cmd_RMAA {
2470     local($_) = @_;
2471     "RMxAA" . $_;
2472 }
2473
2474 sub do_cmd_RMAASC {
2475     local($_) = @_;
2476     "RMxAASC" . $_;
2477 }
2478
2479 sub do_cmd_et al {
2480     local($_) = @_;
2481     "et al\" . $_;
2482 }
2483
2484 sub do_cmd_ibidrule {

```

```

2485     local($_) = @_;
2486     "<img src=\"foo\" alt=\"\ibidrule\">" . $_;
2487 }

Change History

0.0	General: So bored today, decided to rewrite RMAA LaTeX macros from scratch	0.7	onecolumn/twocolumn options (orthogonal to journal/proceedings)	2
0.1	General: Just about working - still missing Fig/Tab/Refs	2	General: Increased spacing between sections in single column styles. Suppressed floats at bottom of pages (didn't work though)	2
0.2	General: All basic functionality present, I think	2	1.0	
0.3	General: Better mechanism for alternative affiliations Added 'guide' option for user guide	2	General: Now does a whole book - lots of stuff tidied up	2
0.4	General: Minor stylistic changes	2	1.1	
0.5	General: Added \fulladdresses and \adjustfinalcols (just about working)	2	General: Added manuscript option, corrected bugs	2
0.6	General: Tweaked \adjustfinalcols (still not perfect) Added proceedings option Added	2	1.2	
			General: Added \plate command	2
			1.3	
			General: Corrected \figcaption to do the caption formatting right Corrected font size of section headings in front matter	2
			1.4	
			General: Added copyright and license info (GPL)	2

1.5	General: Eliminated superscripts from titles in TOC and index . . . 2	2.1	last release under a PRI government (for a while...) 2
1.6	General: More cleaning up: full stops after titles in index, running headers and footers in frontmatter, fontsize in title of index, etc 2		
1.7	General: Fixed more little things. Page labels now work, even if you have no bibliography. You can output the full addresses by hand with the <code>\outputfulladdresses</code> command. Editors' Guide updated but still not finished. Revamped <code>splitbook.sh</code> now produces PS file of each article for web page and also an EPS file of each page for sending to the printers. 2		General: Fixed some inconsistencies in <code>\nocite</code> and <code>\bibitem</code> unification Fixed the definition of <code>\ion</code> so it will work in math mode and in contexts where the typesize is different from normal (e.g., title, fig captions). Modified the definition of <code>\@caption</code> , so we don't write any list-of-figures data (we never use it anyway, and it just causes problems with fragile commands in fig captions). 2
		2.2beta	General: Fixed bug whereby <code>twocolumn</code> option was not passed through to book class. Finally sorted out the "label on last page" issue. 2
1.8	General: Fixed bug in last page label with <code>\suppressfulladdresses</code> . . 2	2.2beta10	General: Fixed <code>\secnumdepth</code> for <code>\book style</code> 33
1.9	General: Corrected position of page number in footer of articles that open on even pages. Ensured that first article in each session opens on an odd page, as do list of abstracts and author index. Added extra space in TOC before the backmatter. Added command for editors, <code>\BoldSessionTitles</code> , that makes produces bold titles for session in the TOC. 2	2.2beta11	General: Just about finished all the ADS stuff now. Except for the references, which I have given up on for the time being. 22 Made <code>twocol</code> and <code>newstyle</code> the default for proceedings. 3
		2.2beta12	<code>\@keywordheader:</code> <code>\addkeyword</code> New user interface for keywords. 15
2.0	General: Added 'newstyle' option, which should be used in all new proceedings volumes (wider abstract, smaller typeface in fig captions, etc.) Added commands for formatting table captions. New demonstration document <code>rmpostsamp.tex</code> for 1-page posters. This will be the	2.2beta13	<code>\@keywordheader:</code> <code>\addkeyword</code> Improved behaviour with <code>.ads</code> file. Use <code>\ADS@sanitize</code> to change definitions of ' and <code>\ion</code> 15
		3.05	General: Added <code>natbib</code> option 3 If the <code>natbib</code> option is used, then set things up so that <code>natbib</code> 's version of the bibliography is identical to the standard one. . . . 4

thebibliography: Removed the \beforebibliostkip and \afterbibliostkip commands, since they cause unwanted vertical space in some instances.	38	This means that you can't use rmaacite and natbib in the same volume.	39
3.06 General: Natbib option turned on permanently	3	3.16 \@kwtwidth: Added extra vertical space between authors and accepted date.	30
3.07 General: Added proof option	3	General: Added \Color command for doing photometric colors. ...	55
3.08 \indexauthor: Remerged changes from 3.06 that got dropped from 3.07 after a synchronization disaster. Basically, the accentless optional argument to \indexauthor. Must add the macro directories to my unison set-up to stop this sort of thing from happening.	19	3.17 appendices: Added appendices environment that does the right thing.	34
3.09 General: Explicitly require a recent version of natbib, so that we get a decent error message if the package is too old.	4	3.18 General: trying out doctex mode ...	3
3.10 General: Set large values for \hbadness, \vbadness, \hfuzz, \vfuzz. To reduce amount of stuff that gets written to the terminal every time you compile something. ...	11	3.19 General: Changes for Silvia - remove addresses from end, new abstract style	2
3.11 General: Moved the \articlename to after the key for consistency with the new natbib stuff.	60	3.21 General: Changes for Silvia - abstracts are now shipped out to ADS.	2
3.12 General: Added option to have title page for each session. Turn it on with \SessionTitlePages. .	44	3.22 General: Allow proceedings articles to have received/accepted dates	2
3.14 General: Option to turn off natbib .	3	3.23 \@keywordheader: \addkeyword now signals a compilation error if the author tries to add more than 6 keywords.	15
rmaabib: Reinstalled old definition of \bibitem for the case where the nonatbib option is requested, so that the rmaacite package will work.		\MSextramargin: Reduce baselinestretch in manuscript style to 1.2. No longer use raggedright for manuscript. ...	10
		General: Full addresses are now automatically suppressed for proceedings style.	3
		Manuscript is now 10 pt instead of 12pt	3
		Manuscript is now on by default.	3
		Now allow Bibtex to work properly	4
		3.24 \@keywordheader: kwdcounter is now reset in \@begofarticlehook to prevent error in book style ...	15

\MSextramargin: Further reduction of baselinestretch in manuscript style to 1.1 since we now have wider margins. . .	10	first page and add it to ADS info.	20
Split manuscript's extra margin into separate horizontal and vertical parts.	10	\ORCIDiD: Add mechanism for giving ORCID iD links	20
General: Added user access to the macro version and date via \rmVersion and \rmDate . . .	2	\abovesectionskip: Use negative values for skip so that first paragraph after section headings is not indented. This is something that I have been trying to fix for years It turns out that the anser was in the documentation for the standard command \@startsection. . .	8
New option boldkeywords that does the keywords in the old ugly way. Now off by default. . .	3	\ps@rmaafirstpage: Change to three-line header with copyright info and DOI.	13
3.25 General: Change \newcommand tp \def when setting \bibfont. This allows it to work with all versions of natbib.	4	General: Change abstract to appear before resumen. Change RevMexAA to RMxAA for consistency with ADS.	2
Updated copyright year.	4	Fix for issue where breaking hyperlink across pages gave an error.	5
Updated email and web addresses to crya.unam.mx. . .	4	Fix the at-sign substitution so that it only eliminates \@ and does not mess with email addresses.	65
3.26 \@kwtwidth: Add extra label to review articles	30	Make hyperref and etoolbox into hard requirements, since we now use them extensively. . .	5
General: New option for review articles	3	appendix: Added appendix environment for case where there is only one section.	35
4.0 \ADS@doi: Save DOI for ADS . . .	23		
\ADS@dumpdata: Write all author affiliations for ADS	26		
\DOI: New user command \DOI to typeset DOI in the header of
